

AqBanking - Bug #174

aqpaypal-tool --help gibt keine Liste der unterstützten Kommandos aus

12.01.2020 22:18 - rhabacker

Status:	Closed	Beginn:	12.01.2020
Priorität:	Normal	Abgabedatum:	
Kategorie:			
Betriebssystem:	Linux, Windows	Anwendung:	aqbanking-cli
AqBanking-Version:	5.99.44	Version der Anwendung:	5.99.44
Beschreibung xxx@localhost:~> aqpaypal-tool --help Dies ist Version 5.99.44 Benutzung: aqpaypal-tool [ALLGEMEINE OPTIONEN] KOMMANDO [KOMMANDO-OPTIONEN] Allgemeine Optionen: [-D PARAM] [--cfgdir=PARAM] Specify the configuration folder [-n] [--noninteractive] Select non-interactive mode. This automatically returns a confirmative answer to any non-critical message. [-A] [--acceptvalidcerts] Automatically accept all valid TLS certificate [--charset=PARAM] Specify the output character set [-P PARAM] [--pinfile=PARAM] Specify the PIN file [-h] [--help] Show this help screen. For help on commands, run aqbanking-cli <COMMAND> --help. Der Text "Kommandos:" und die nachfolgende Liste der Kommandos wird nicht ausgegeben.			

Historie

#1 - 12.01.2020 22:46 - rhabacker

Show this help screen. For help on commands, run aqbanking-cli <COMMAND> --help.

in dieser Zeile steht noch fälschlicherweise 'aqbanking-cli'

#2 - 14.01.2020 10:24 - rhabacker

Kommandos werden anscheinend mit 'help' und nicht mit --help ausgegeben.

```
H:\Downloads\kymoney\kymoney-4.8.aqbanking6.5755e603e\bin>aqhbci-tool4.exe help  
Benutzung: help COMMAND [LOCAL OPTIONS]  
Commands:
```

Commands:

```
mkpinlist:  
  This command creates an empty PIN file
```

```
adduser:  
  Adds a user (-> setup HBCI for a bank)
```

```
deluser:  
  Deletes a user.
```

```
getkeys:  
  Requests the server's key
```

```
getcert:  
  Requests the server's SSL certificate
```

`createkeys:`
Create user keys.

`sendkeys:`
Send the user keys to the bank.

`changekeys:`
Change user keys (and media).

`getbankinfo:`
Request bank information

`getaccounts:`
Requests account list for a user

`getaccsepa:`
Requests SEPA account list for a user

`getsysid:`
Requests a system id for the given user

`getitanmodes:`
Requests supported iTAN modes for the given user

`listitanmodes:`
Show a list of supported iTAN modes for the given user

`setitanmode:`
Select an iTAN mode for the given user

`listusers:`
List the users

`listaccounts:`
List the accounts

`changePIN:`
Change the PIN of a key file

`iniletter:`
Print the INI letter for a given user

`addaccount:`
Manually add account

`delaccount:`
Deletes account

`sethbciversion:`
Set the HBCI protocol version to be used

`setMaxTransfers:`
Set the maximum number of transfers/debit notes per job

`setsepaprofile:`
Set the SEPA profile for transfers/debit notes

`setTanMediumId:`
Set the medium id for some PIN/TAN methods (like mTAN)

`adduserflags:`
Set special flags for the given user

`subuserflags:`
Unset special flags for the given user

`addaccountflags:`
Set special flags for the given account

`subaccountflags:`
Reset special flags for the given account

`logfile:`
Make an AqBanking log file anonymous

```
versions:
    Print the program and library versions
```

aqhbci-tool4 gibt mit **--help** die Optionen und die Kommandos aus

```
H:\Downloads\kymoney\kymoney-4.8.aqbanking6.5755e603e\bin>aqhbci-tool4.exe --help
This is version 5.99.44
Usage: aqhbci-tool4.exe [GLOBAL OPTIONS] COMMAND [LOCAL OPTIONS]
```

Global Options:

```
[-D PARAM]
[--cfgdir=PARAM]
    Specify the configuration folder

[-n]
[--noninteractive]
    Select non-interactive mode.
    This automatically returns a confirmative answer to any non-critical
    message.

[-A]
[--acceptvalidcerts]
    Automatically accept all valid TLS certificate

[--charset=PARAM]
    Specify the output character set

[-P PARAM]
[--pinfile=PARAM]
    Specify the PIN file

[--opticaltan=PARAM]
    Specify an external tool to display optical TAN challenges

[-h]
[--help]
    Show this help screen. For help on commands, run aqbanking-cli <COMMAND> --help.
```

Commands:

```
mkpinlist:
    This command creates an empty PIN file

adduser:
    Adds a user (-> setup HBCI for a bank)

deluser:
    Deletes a user.

getkeys:
    Requests the server's key

getcert:
    Requests the server's SSL certificate

createkeys:
    Create user keys.

sendkeys:
    Send the user keys to the bank.

changekeys:
    Change user keys (and media).

getbankinfo:
    Request bank information

getaccounts:
    Requests account list for a user

getaccsepa:
    Requests SEPA account list for a user
```

```
getsysid:
  Requests a system id for the given user

getitanmodes:
  Requests supported iTAN modes for the given user

listitanmodes:
  Show a list of supported iTAN modes for the given user

setitanmode:
  Select an iTAN mode for the given user

  Set the medium id for some PIN/TAN methods (like mTAN)

adduserflags:
  Set special flags for the given user

subuserflags:
  Unset special flags for the given user

addaccountflags:
  Set special flags for the given account

subaccountflags:
  Reset special flags for the given account

logfile:
  Make an AqBanking log file anonymous

versions:
  Print the program and library versions
```

Ich schlage vor, das mal zu vereinheitlichen, so das '--help' alles ausgibt und 'help' entfernt oder wie '--help' arbeitet

#3 - 14.01.2020 10:26 - martin

- Status wurde von New zu In Progress geändert

Ja, sehe ich auch so. In aqhbci-tool ist das auch schon so geregelt. aqpaypal wurde noch nicht angepasst.

#4 - 17.01.2020 17:41 - rhabacker

Mit aqbanking git version 5.99.f62ed8b5 sieht das jetzt besser aus.

```
~/aqbanking> aqpaypal-tool --help
Dies ist Version 5.99.45
Benutzung: aqpaypal-tool [ALLGEMEINE OPTIONEN] KOMMANDO [KOMMANDO-OPTIONEN]
```

Allgemeine Optionen:

```
[-D PARAM]
[--cfgdir=PARAM]
    Specify the configuration folder

[-n]
[--noninteractive]
    Select non-interactive mode.
    This automatically returns a confirmative answer to any non-critical
    message.

[-A]
[--acceptvalidcerts]
    Automatically accept all valid TLS certificate

[--charset=PARAM]
    Specify the output character set

[-P PARAM]
[--pinfile=PARAM]
    Specify the PIN file

[-h]
[--help]
    Show this help screen. For help on commands, run aqbanking-cli <COMMAND> --help.
```

```
3:2020/01/17 17-38-49:(null) (31364):banking_update.c: 613: AqBanking config folder found at [/home/ralf/.aqbanking/settings6/users]
```

Commands:

```
listusers:
    show Paypal users
```

```
listaccounts:
    show Paypal accounts
```

```
adduser:
    add a Paypal user and a corresponding account
```

```
setsecret:
    set credentials for Paypal API n
```

```
3:2020/01/17 17-38-49:aqpaypal-tool(31364):aqpaypal-tool.c: 246: Error calling control function (1)
```

Das einzige was Benutzer noch irritieren könnte, wäre die folgende Zeile, die impliziert, das da noch ein Fehler sein könnte.

```
3:2020/01/17 17-38-49:aqpaypal-tool(31364):aqpaypal-tool.c: 246: Error calling control function (1)
```

#5 - 17.01.2020 20:26 - martin

Danke fuer den Hinweis, ist im aktuellen GIT behoben.

Gruss
Martin

#6 - 17.01.2020 21:51 - martin

- Status wurde von In Progress zu Closed geändert
