

AqBanking - Bug #236

"Signer not found" on Window

04/17/2021 09:01 PM - rhabacker

Status:	New	Start date:	04/17/2021
Priority:	Normal	Due date:	
Category:			
Betriebssystem:	Windows	Anwendung:	KMyMoney
AqBanking-Version:	6.2.10	Version der Anwendung:	6.2.10

Description

With mentioned version I got a "signer not found" message when trying to update a paypal account from within kmymoney.

The appended patch fixes that issue, by not excluding the search for bundled certificates if --enable-system-certs=no has been specified on configure command line.

Hi,

Is there anything in the way of this patch to be added to the next version ?
