

AqBanking - Bug #242

AqBanking v6.3.2.0stable does not find my pcscd

02.10.2021 22:03 - ilippert

Status:	Closed	Beginn:	02.10.2021
Priorität:	Normal	Abgabedatum:	
Kategorie:		Anwendung:	GnuCash
Betriebssystem:	Linux	Version der Anwendung:	
AqBanking-Version:	6.3.2.0		
Beschreibung Hallo, ich habe gnuCash 4.8 flatpak installiert, um es gebündelt mit AqBanking v6.3.2.0stable zu bekommen. Während ich mit gnuCash 4.6 und den manuell installierten Paketen der AqBanking meinen Cardreader nutzen kann, bekomme ich mit gnuCash 4.8 flatpak diese Meldung, wenn ich versuche, online banking zu betreiben: AqBanking v6.3.2.0stable Sending jobs to the bank(s) Sorting commands by account Sorting account queues by provider Send commands to providers Send commands to provider "aqhbc1" AqHBCI started Connecting to bank... Connected. Opening dialog Encoding queue The PC/SC service is not running. Please make sure that the package "pcscd" is installed along with the appropriate driver. For cyberJack devices you will need to install the package "ifd-cyberjack" (Debian) or "cyberjack-ifd" (SuSE). For most other readers the package "libccid" needs to be installed.<html> The PC/SC service is not running. Please make sure that the package pcscd is installed along with the appropriate driver. For cyberJack devices you will need to install the package ifd-cyberjack (Debian) or cyberjack-ifd (SuSE). For most other readers the package libccid needs to be installed. </html> Unable to encode Disconnecting from bank... Disconnected. AqHBCI finished. Ich nutze Fedora 34.
