

AqBanking - Bug #285

[PATCH] Configure.ac: Do not clear the LIBS var

26.08.2022 00:54 - wrobelda

Status:	New	Beginn:	26.08.2022
Priorität:	Normal	Abgabedatum:	
Kategorie:	Gwenhywfar	Anwendung:	andere
Betriebssystem:	andere	Version der Anwendung:	
AqBanking-Version:	5.10.1		
Beschreibung The configure.ac currently sets the LIBS variable to empty, as a side effect of the ldl test, which voids whatever might have been provided via the command line or environment variable by the user. vcpkg, for example, uses that to inject a set([1]) of default win32 api dlls to be linked against, which get lost in the process. This patch fixes that.
